Extending AutoCAD A vendor can extend AutoCAD to create CAD systems that cater to the specific demands of a particular industry. By creating a more generalized version of AutoCAD for a specific industry, third party CAD vendors can make CAD software that is more economical than starting from scratch. Industry specific applications are usually not directly related to AutoCAD and therefore may contain customization or the AutoCAD engine to be customized or adapted by the vendor to accommodate the particular industry. By using a pre-existing, non-AutoCAD application as a base, the vendor can build on top of that in order to create a CAD program tailored to the specific needs of that industry. This is often done through the use of plugins or add-ons. Graphics vendor Adobe Corporation, for example, produces a range of products that fall into this category. Adobe XD is an illustration and prototyping app. Adobe XD was released as an Adobe XD plug-in, accessible through the Autodesk Exchange app store. The plug-in was based on the AutoCAD Architecture product. Adobe XD was later rebranded to Adobe XD. Autodesk provides a range of products for the construction industry. Kapandji procedure for degenerative joint disease. Degenerative joint disease of the wrist in which the joint surfaces are damaged, does not necessarily mean that arthrodesis will be required. In contrast, the presence of large joint surface erosions is a prerequisite for arthrodesis. Furthermore, in young patients with substantial proximal row carpal bone damage, the carpal bones may require fusion to prevent carpal collapse and deformity. C. E. Kapandji devised a surgical procedure to reconstruct the carpal bones without compromising the blood supply to the forearm, and provided the basis for proximal row carpectomy. In addition to correcting deformity and pain, this procedure restores or maintains hand strength, and provides early motion after bone union. Last updated on. From the section Formula 1 Finnish driver Olli Palopo won the European Formula 3 championship in 2006 and was selected as a Renault reserve driver Former Renault Formula 1 driver Olli Palopo has been sacked as Williams' reserve driver after failing a drugs test.
