president Dilma Rousseff's popularity is plunging after her impeachment trial and she is trying to stem the growing tide of discontent against her government. The latest statistics from pollsters Datafolha show Dilma's approval rating she got at the height of the scandal-plagued impeachment process. "I have great confidence in the people of Brazil, but the present situation is not good for anyone, least of all the government," Datafolha director André Gis, told Reuters. In the latest survey, only 30% of respondents said they were dissatisfied or very dissatisfied with how she has handled the crisis that has brought her to trial, according to the Datafolha poll. Dilma's approval ratings have been falling since impeachment was confirmed by Congress in August. Her approval rating began to slide in September when her ministry was accused of illegal dealings in state-run oil company Petrobras. The plunge accelerated with the release in October of recordings that showed bribery schemes involving ministers and other members of the executive branch. Dilma's popularity is just as bad among the poor, who make up much of her support base, as it is among wealthier Brazilians. Datafolha said 38% of those in the top group, who are the ones who tend to support her. Datafolha found the same trend when it asked respondents for their views on Brazil's economy, the main issue which has led to her impeachment. "It is a mixed picture," said Gis, noting that while 55% of the poor approved of the government's handling of the economy and the mismanagement of public finances by the government. Earlier in October, Brazil's stock market closed at a record high. The benchmark Bovespa index rose more than 10% at the end of the month, lifting the market to a record high and marking the 10th consecutive monthly gain for the market.Q: Access vb.net

### What's New in the HardLink ShellExtension?

HardLink ShellExtension is a powerful and comprehensive application that allows you to create and manage both links and junctions. It simplifies the process of creating and managing file system links by using the context menu in Windows. Just right-click on a file or folder and you can find and place several different link types: - hard links: this is a copy of a file or folder but with a new name - junction: also known as soft link. This is a way to maintain the same file in two different places. Just create a junction, and then copy a file into the location of that link. As a result, the original file is available in both locations. - smart link: it's a logical copy of a file or folder. Its purpose is to merge multiple files and folders into a single item. - smart mirror: it's a hard link to a new location where there is only one copy of the file. - hard link clone: it's a way to copy a file or folder. You can easily tell the difference between different file system links as HardLink ShellExtension provides a red icon for junctions and a purple icon for symbolic links. The application allows you to modify the properties of a file and drop it in the right folder. To revoke the creation of a new link, simply right-click on the new item and choose Cancel from the context menu. In addition to being able to create links, you can also use HardLink ShellExtension to create junctions and other types of folders. From this, you can determine the difference between a junction, hard link clone, symbolic li
