User interface Before the user interface changed in 2012, there were many different models in AutoCAD. The 2011 release was the last one to have these three: Windows-based Non-Windows-based Macintosh (both Intel-based and PowerPC-based) The Windows-based model had been the original AutoCAD model. It uses a single user interface and scripting language called AutoLISP. The model is still used for the older Windows operating systems (Windows 7 and earlier) and for AutoCAD LT. AutoCAD 2015 introduced a new model with a new user interface and programming language, Visual LISP. The current user interface is a Windows based model, with users running AutoCAD on Microsoft Windows operating systems. New workflows or business processes are implemented using either Visual LISP or AutoCAD's own proprietary visual programming languages or by using Java Script or HTML. From AutoCAD 2012 to 2016, the operating system from which AutoCAD is distributed was not important. The model is the same regardless of what operating system is being used, but the user interface and programming language are different. The operating system is no longer a factor. In AutoCAD 2016, AutoCAD LT was renamed to Autodesk Design Review, and the previous Macintosh and Windows-based products were merged into a single product, Autodesk Fusion. Both Windows-based and Macintosh-based versions of AutoCAD use the same graphic interface called UACI. Trademarks Autodesk is a registered trademark of Autodesk, Inc.
