The Problem With 'Designer' Coffee Designer coffee isn't just for snobby hipsters. No doubt about it, designers have a reputation for being fashionistas. But in truth, we're just as likely to frequent the old-fashioned coffee shop as any other consumer. "Designer" coffee, then, has a much broader, more general meaning. If it doesn't have you daydreaming about that new summer linen pantsuit, you're not really a designer. This points to a more fundamental problem for coffee. As the public taste for gourmet coffee has become more mainstream, the coffee market has experienced more competition. In this environment, the average consumer has far fewer good options than they used to. And that means there's a lot of room for coffee shops to leap into the shadows and lower the bar. Think about the once-exalted coffee scene. We had more than a dozen local roasters in downtown Portland, Oregon, in the 1990s. Several hundred coffee shops, each with its own brand, tried to lure customers into their cafes. In the 21st century, we now have less than a dozen local roasters and dozens more coffee shops. And the latter can afford to offer fancier beverages. A less attractive coffee scene has a profound impact on those of us in the coffee business. All too often, we don't make the coffee itself. Instead, we sell a fancy beverage to customers. It's not just that fancier drinks make it harder to make a living. It's that we've raised the bar on how great coffee should taste. A lot of coffee shops have tried to address this by offering higher quality beans, of course. They're right to try to sell more of their cup, and they're right to offer flavors that more people might enjoy. This has helped. We're seeing a lot more craft coffees in the stores, especially in Portland, where there's no shortage of small roasters. But this
