Description: Spartan 8 contains the capability of a full simulation tool, with a choice of finite element discretization and conforming mesh refining. Spartan 8 allows the efficient simulation and analysis of structures and components of extreme complexity, size and weight. In addition, it has a special chapter devoted to stress analysis. We are pleased to present our latest software, Spartan 8. It is an advanced FE simulation tool for the analyst, engineer, or student. The controls are designed for maximum flexibility, ease of use, and to minimize the demands on the student's time. This new release of Spartan 8 has numerous enhancements, including the ability to model general boundary-value problems (such as fluid flow or heat transfer), the introduction of the Arbitrary Lagrangian-Eulerian (ALE) method for setting up the mesh automatically, and a new governing equation solver. In addition, our new SolidWorks plug-in allows easy use of the simulator through an integrated user interface to SolidWorks.
