Currently, optical sensors are used to measure various physical characteristics, such as temperature, strain, pressure, proximity, rotation, and vibration. Optical sensors are made of two or more materials that have very different responses to incident light. One material is sometimes referred to as the reference material; the reference material may be a bulk material, a thin film, or an array of materials. The second material is sometimes referred to as the responsive material. A simple example of an optical sensor is a photodiode. A photodiode is a light-sensing component having a p-n junction in semiconductor material. An incident photon may trigger a photo-current in the diode. The magnitude of the photo-current is dependent on various factors, such as the amount of light that strikes the diode, the band gap of the semiconductor material of the diode, and doping characteristics of the semiconductor material. For example, the band gap of the diode determines the wavelength range over which the diode is sensitive to photons. The doping characteristics of the diode determine the minimum voltage that is required to generate a photo-current. Many optical sensors are designed to perform specific functions. For example, it is well-known that the temperature of a photodiode can be determined by detecting the magnitude of the photo-current generated by the diode, and comparing that magnitude to that of a standard diode operating at a known temperature. In other situations, a reference material may be used as a thermocouple to measure the temperature of the reference material. Many optical sensors use light pulses (or light signals) to measure a physical characteristic. Light pulses are used to determine a characteristic

The unification of the Temple of Geb in the Ptolemaic Period is seen as a perfect example of the return of Osiris, or Mother's God. The return of Osiris was, during the period known as the First Intermediate Period (1166-1069 BC), centered on the funerary cult of the deceased Memphite High Priest, Mereruka-Osiris, and his cult-title was "Greatest of the Gods." Mereruka-Osiris was initiated into the cult by the brother of his father, "who also happened to be the Second Prophet of Osiris.�

You can use the art as a reference, but please do not steal. An original illustration can be found here.) Part 4 Winter had reigned over Hogun for over a month now, but Yotsugi's fur was still as white as snow. The winter had lasted for far longer than expected and when spring finally returned, Yotsugi was no longer drowsy and happy. In fact, there was hardly any feeling in Yotsugi's body anymore. The realization that he was turning into a 'homicidal beast' finally came to light, and after a moment of mental turmoil, Yotsugi accepted the harsh truth that he has lost control. Over the past month, the current of thoughts within Yotsugi's head alone had been his "plan", and it was thanks to that mechanism that he didn't even remember what right hand he was supposed to use next. However, he watched his claws and heard his bloody footsteps, and this realization made his misery even greater. The moonlight shining through the window was beaming on his white fur, but Yotsugi was still as cold as ice. As for his hand, the feelings of pain came and went, and so did the memories of it repeatedly stabbing something in an all-conquering fury. Yotsugi heard a bang and a fall, and in the next second, he could see the print of someone's front paw on the door. There stood a fox, crouched in front of him with a slightly hunched posture and blinking eyes. "Worrying about your rude family, oh, hermit?" the fox said while scratching his head. Yotsugi simply replied "e" with a motion of his head, and the fox found this amusing. With that comment, the fox walked past the window and started waving the tail of his body. Apparently, there was a fox on the terrace, Yotsugi deduced that. Yotsugi tilted his head sideways and pulled out a little horseshoe from his sleeve. He stared at the fox for a while as he tried to make**

**YumeCore is a game designed to be played with headphones. It allows you to uncover a beautiful, magical world. (C)2014-2017 Shiro Games Co., Ltd. Screenshots Development Progress Tuesday, August 27, 2018 The development of YumeCore started in September 2017. If you'd like to check our progress or to play the game, you can find links below! Tuesday, August 27, 2018 Been some time since we've released a blog post about the development progress, but this time we'll share our high-level thoughts about what we've done so far! We want to express our gratitude to the total of our users and let you know how we're progressing to the final release! One reason we started developing YumeCore was to make an experience that didn't focus on a high score, but rather focused on the spirit of exploration. We have players who are very good at the game, but they are always having difficulty in keeping up with their progress, which could have otherwise been faster. One of the biggest problems with YumeCore is that it relies on the player's intuition, which is not something that is easily learned through experience. So we implemented features that required you to acquire skills, as in a real life game, and one of the most basic ones was the lack of player instructions. We think this is a concept that will add some challenge to the game! There have also been similar games that have tried to expand the unknown environment around you, so even though YumeCore's world isn't a complex one, we think we can expand it a bit further with the concepts we have planned for each world. The most recent update from July 11th went over the issue with the footprint of the player's avatar (the small icon that is attached to you), which had been a big nuisance. If you'd like to see what we mean, here are some videos with actual instructions! We will continue developing YumeCore based on community feedback. We're always listening to the suggestions that you the users, so there are many things we'd like to continue implementing! Please give us a lot of feedback from now on! Thank you so much for playing YumeCore! - Shiro Games Team Thursday, August 22, 2018 We're still working hard on the official release of YumeCore, and we are trying to give you more regular**
