the GPL license it's safe to  
say the world would have  
been a less interesting  
place if the Internet had  
been around. The internet  
has delivered so much to  
us, ranging from  
socializing to the news, in  
one place. I still  
remember how shocked I

---

was to discover that I could simply go to a website and read anything I wanted to, without having to go through a publisher and pay to have it distributed to people. The Internet would have made my life easier in that sense, but the more I found out about the history of how the internet came to be, the more I think it would

---

have been a bad thing. The internet is a very new invention, first introduced by the U.S. military, back in 1989. It was supposed to be used to keep in contact with one another as a part of a network, which at the time was called MILNET. One of the basic uses of the network was to distribute information about new inventions, as well as to

---

disseminate news and information to one another. Today, there are a lot of websites that you would never have been able to find before the internet, and you may even not be able to find them even now, unless you're specifically searching for them.

Although the U.S. military had originally intended to get rid of the network

---

after they decided to put it to use for the purpose for which it was originally intended, the military didn't entirely succeed in achieving its goals. One of the reasons was that a lot of people used the network to store pornographic material, and also to communicate and share hacking techniques. Also, since there was no regulation

---

on the network at the time, there was also a lot of illegal activity on the network that would have been impossible if the network had been run the way it was meant to be. So, the U.S. military had to make some changes in the network to make it secure, and also to re-purpose it for its original intent. After the U.S. military managed to get

---

its original intent of the network
