Fizdale said Jackson has been wearing a splint for nearly a month, and it's something the team will monitor, particularly in the playoffs. Jaren Jackson Jr. hasn't played since Nov. 18 because of ankle sprain. Getty Images/Tony Gutierrez Fizdale said Jackson will be sidelined for at least a month and a half, so he's going to need time to prepare

for the playoffs. The rookie signed a three-year, \$61 million contract after leading the Grizzlies to the playoffs. Fizdale said Jackson is day-to-day at this point. Fizdale has gotten the most out of the Grizzlies' young players this season. Kent Bazemore, JaMychal Green and JaMychal Green have all had at least 10 minutes a game with the Grizzlies. The Grizzlies have also gotten an unexpected boost from Josh Green, a journeyman who was on waivers for more than two months before the Grizzlies acquired him on Nov. 25. Green has hit nearly 40 percent of his 3-pointers in his last five games. The Grizzlies have also seen improvement from Mike Conley Jr., the younger brother of the reigning All-Star. Conley has given the team a nice balance with his ability to drive and score.

But the biggest boost has come from Jaren Jackson Jr., who looked like a future star after he averaged 23.1 points in his final seven games of the regular season. Jackson missed the last

The present invention relates to a process for forming thin films on a substrate of heat-insulating material, especially substrates for the formation of heat-insulating layers in the manufacture of heat insulators. In the art of heat insulation, thin-film materials are typically used as a thermally conductive layer disposed between an insulating substrate and a heat-insulating layer or as a layer constituting part of the insulating substrate. A process for forming thin films using a vacuum evaporation technique is employed as one of the methods for forming the thin films. According to this process, a material for the thin film is evaporated and deposited by a vacuum evaporation apparatus, a sputtering apparatus, or the like. During the vacuum evaporation, it is necessary that a thin film be formed on the substrate. The presence of particles in the thin film deposited on the substrate may make the thermal conductivity of the thin film smaller than the theoretical value. The presence of particles in the thin film also
