To evaluate the performance of routine screening of asymptomatic women for breast cancer. We performed a systematic review of the literature on diagnostic test accuracy (DTA) in women without breast cancer presenting to primary health care practitioners. We included studies from March 1992 to March 2002 that investigated the performance of the screening tests in asymptomatic women. DTA for all breast cancers, for breast cancers = $-2*v + 11$ for $v = 5$. Let x be $-1 - ((-12)/6)/(4/14)$. Let r be $((-2)/(-2)$
