Hi, I am just a newbie for the hackintosh vnd tried go install Mojave on my. Leopard, OS X 10.7 Lion, OS X 10.8 Mountain Lion, or has OS X 10.9 Mavericks, OS X 10.10 Yosemite,.Q: Data structure for multi-dimensional object I want to create multi-dimensional object for cache. Suppose I have to cache details about store such as current price (or what have you), number of users etc. I was thinking about storing that object in a map such as Map>> But I feel that this could get pretty large (10M objects) and I want to avoid that if possible. So I was thinking to serialize that map to a file or send it to database when somebody asks for it. What do you think of this approach? How would you do it? A: Not sure I really understood your question, but do you want to have your access to any of these elements easier to get? If you want to, for example, get that element by index you could keep a wrapper structure around the main structure: class MyElement{ int index; String key; //other elements etc } c6a93da74d
