I use PhotoDraw to create sketches and then rasterize them into vector graphics in Adobe Illustrator CC. Not long ago I wrote about this workflow and mentioned how it's ideal in cases like mine.

However, with the introduction of the iPad Pro and Apple Pencil, this process can now be done anywhere. Add the new Photoshop Sketch app and you can use your iPad Pro as a sketching pad using the Apple Pencil. I use the iPad literally every day for business and have worked in every scenario from casual park to coffee shops. I never had to look for a sketching tablet and I never had to travel with my laptop.

Start by making a copy of your existing artwork: choose File>Save As; and name the copy, such as "Computer Graphics Art Piece.psd". Create a folder to save the file in, such as "Artist.". Save the file in the folder you created, and give it a descriptive name, such as "Skyline.psd." The clicker tool is used to pick up the pixels within the artwork and move or *click* them around. First, define the area where you'd like to click. The *Window* menu offers three options: *Image Pixels*, *Layers*, and *Select Region*. More specifically, define where the clickable area is by selecting *Image Pixels* first, then *Layers* second, and *Select Region* third. While clicking, you're working within the Artist layer. In the Layers panel, find the *Background* layer, and click it. In the *Layers* panel, you see that you have two layers at this point: Artist and Background. The Origin tool is used to move the pixels in the Background layer and change where they appear on the Background layer. First, define where you want the move to happen by selecting *Image Pixels* first, then *Layers* second, and finally *Select Region* third. As we mentioned above, experience is one of the biggest factors. Even as our tutorial was being written, we were referencing resources from 2019. In 2020, we'll update it.
