Autodesk .Kitchen Lighting Tip: Use White  
Lights on a Dark Floor Add a pops of white to a  
dark kitchen by painting the floor white. If your  
room is a little on the dark side, painting the  
floor bright white can save some money on  
lighting. While white walls look great, they can  
become hot if not lit properly. Painting your  
kitchen a light and bright white can save you a  
lot on lighting because white surfaces reflect  
the light back towards the ceiling. White  
ceilings also make the room look bigger than it  
is. Getting rid of floor shadows will also make

the room appear wider. The surface of the floor will become the mirror that reflects the light to the other areas of the room. For a floor that is a little too dark, the easiest way to brighten it is by painting it white. Painting the floor with white paint or wallpapering is one of the best ways to achieve this effect. Another easy way to brighten a dark floor is to use a floor lamp that you can place in a corner of the room. It will be a good idea to replace the standard lamp that is in your kitchen with a floor lamp, if you don't have one already. Changing out your standard lighting for floor lamps is the quickest way to brighten up a room. The floor lamp will come with a shade that will keep the light from being scattered around the room. If you already have floor lamps, you should consider installing a ceiling light. These lights will come with lights that will be mounted above the lamps. This is the best solution if you have a room that already has many lamps or if you want to install more. A good ceiling light

will make your room feel brighter and cleaner.
