I've been using Photoshop for our photography business for the past four years and I have to admit that the last update in the fall of 2018 was actually a disappointment for me. Before then, I was very happy with the Creative Cloud version of Photoshop and was reinstalling it on a regular basis. The version in that fall was Photoshop CS6, and it definitely felt like a photo-editing hotbed was closing. The new features brought about by Photoshop Release 15 were as follows:

- An intuitive interface
- New smart tagging and document organizing
- Easier image editing
- Auto Cleaning
- Pixel-level control of parts of images
- Artboards
- Motion tracking
- Smart Objects
- Collaboration
- Direct access to cloud services
- Rich layers
- Support for iOS devices
- Live Photos
- High Dynamic Range

These little things may hang next to your computer (on a USB string or a decent, comfortable chair) and collect dust for years, but new features like direct access to cloud services such as Dropbox,

Google Drive, and iCloud, the ability to edit Live Photos, new audio/video filters, and improved High Dynamic Range copying will make the most of your macOS system out-of-the-box. It is most definitely worth buying the 2018 version of Photoshop—the podcasting is much more usable and useful in Photoshop Creative Cloud.
