If you have more than one Windows installation (for example, dual boot), you may use it to back up and restore your documents in a different location. When

you install the application on your computer, all the settings are saved to the registry. They can be used to restore your application to its original settings.

Main features: Killer Copy can create a backup of your documents in the following folders: •

• %APPDATA%\Microsoft\Windows\

• %APPDATA%\Roaming\Microsoft\

The backup can be saved to the selected folder, or to another location. You can specify an interval for the backup, and the program will run and complete it in the selected time. There are three

options for restoring the backup: • With

a new installation • With a backup •

With the original installation If you use KDC, you can select what applications are installed, and KDC will install only

those applications. KDC also monitors the registry, and sends information to the KDC server. The backup will be installed in its default location, unless you specify otherwise. Finally, the backup can be compressed or encrypted. In addition, the program can extract text and HTML files from Windows system registry. This feature works with `HKEY_CLASSES_ROOT\*\shellex\Context` menu. And You can also use `HKEY_CLASSES_ROOT\*\shellex\String` menu to extract and import files from the local storage. Not only this, This application supports Unicode character by default. So you can add your favorite character to list directly. You can add UTF-8 character by default for the
