Adobe Photoshop is one of those products that just keeps getting better, add on, upgrade, and now it's up to version CC. Aside from upgrading to LR 6 and CS2, the latest version of CS6 is when I switched to Photoshop over Elements. I love the creative nature of Photoshop as much as the challenge of learning it. I'm just a beginner but this latest version, which is the newest CC version, has saved me a lot of time and hassle as well as provided the tools and the performance to produce wonderful results. It is fast and efficient and the learning curve, as I'm sure you've read in a few reviews, is not as steep as it seems. Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC. Regards! Smart previews are beyond important in DNG development. In the past I've always resisted them because they would not work properly for what I was doing and I'd get weird "click" results. Perhaps with newer CS6 apps it works better but it was still not easy to get reliable results. Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. A world-wide epidemic was gripping the human race. Its name was COVID-19 and it was killing people. It would be months before they would find a cure. Hundreds of thousands of people around the world were already living with "the coronavirus," and would die from it. Millions more would become sick, suffer, and live with the pain for months or years. And yet, at the same time, for every new case, the world was discovering new genetic mutations and theoretical treatments for the illness. The good news was that scientists were finding real cures for other infections raging around the world. But that was just the tip of the iceberg. Picture, if you will, an ocean of knowledge—all of it in the hands of researchers around the world, for free access on the internet. And someone had just invented a way for them to work together, beyond the barriers of languages and cultures and the occasional toxic infighting. What if researchers could collaborate around the world, instantly, to answer questions and share their findings—all with the click of a mouse? What if they'd be guided by other researchers to the best experts on where to research, when to research, and what to do with their findings? What if they'd be empowered to make decisions, not just about what to research, but when, and what to say about their findings? Al Manktelow, cofounder of Twistr, had the idea and he had the need. He needed the world's experts on COVID-19 in one place, where they could work together and help save lives. No, he didn't need a new technology to do it. He just needed all those world experts to agree, in an open way, to work on the disease together, from wherever they were. e3d0a04c9c

... uselight Editing is a Photoshop feature that makes it easy to correct and edit using the Lightroom-like workflow. For Stacked Lightroom, this feature now allows users to switch between layers, save work spaces, and even work together on multiple smart objects to edit in one place. Most users are familiar with Lightroom's Undo option, and this workflow can take a more comprehensive approach: it allows you to apply one type of correction to an object, save the work space (or discard it), make changes or corrections, then revert the changes, and continue down the pipeline of corrections and changes until satisfied with your work.
