One of the last updates for Lightroom 4.3 was a major release aimed at improving the way people used Lightroom. Not only do users get more flexibility when choosing points in an image, the name of the point is also available for Selection settings and Tools. The Patch tool can now be used to correct all selected areas of an image, rather than requiring the user to choose the threshold to determine whether the selected area is affected. Patch can also be used for the Brush options to quickly correct areas of an image where there are no points picked. This new functionality comes with a few gotchas. This options is available for free in the Windows version of Lightroom 4.3. However, the Mac version only allows you to toggle between using the tools and patch, where the Patch tool is, but the Patch option itself is not available.

In the case of the new Photoshop, it seems that the tool has been overhauled like no Photoshop before. In terms of the UI, it's pretty much like a combination of the most recent version of Photoshop, Photoshop CC and Photoshop CC 2019, but it does not necessarily mean that the features are the most recent ones. In terms of performance, the new Photoshop version is superfast and is extremely efficient in terms of processing. As the speed of processing becomes the biggest bottleneck in the software, it would be an interesting tool in the Photoshop CC 2019 range. The features have been refined so that it can perform at optimum speed. Adobe Photoshop CC 2019 features a feature called "AI Darkroom," which acts as an addition to Photoshop's "AI panel." This new tool enables dark room photographers to retrieve a more accurate-looking, and more realistic image with the assistance of Adobe Sensei. In the process, the AI panel will guide you step by step through various adjustments, even suggesting an image that you've taken. The AI panel is powered by both color and tone, and it includes image data that is updated with the latest changes in the AI panel to suit your expectations. The app now also automatically saves your changes, so that you can make any adjustments that you have made, and not just those you have saved. The new EXPERIENCE menu has been curated with your to-do lists, and the speed and optimization. There are also a number of new Artboards that are so easy and intuitive to use. The new feature enables users to drag and drop Art Boards from one document to another. The new tool looks great in both

artboards that were customized, and those that were not. The widely known tool, “Toolbox” is also back and able to support both the UI design changes and the new features that you can customize at your personal choice.
