Edmund DeMarines I'm 37 years old, I finished primary school (Sint-Jan Berchmanskollege) and was one year in the Antwerp "Polytecena" and just finished the "Kring van Eigenheden" at the UvA university in Amsterdam in November 2013. My Master was doing my thesis about "Compression of Color images in Lightroom" under the supervision of Pierre-Yves Ouillet. Adobe has just announced a new version of the Acrobat Reader. This release of the Reader is all based in the cloud. It is an instantaneous document delivery system. Who never forget the email I received when I first heard about this new cloud solution? Surprise! Cloudy papers are floating very strongly. The main idea of the cloud Reader is simple: we want a cloud-based service for publishing documents in PDF format, in a secure way. The reader is available online and can be a convenient reading format. And the best part is that as long as there is valid connectivity at the moment, the files can be made available. The reader can be obtained with limited bandwidth using a CDN, but there are other possibilities of distribution, such as streaming. The reader is available for both personal use and commercial use. ...File and folder management: If users have uploaded many files from their desktop often, they can create folders directly on their Reader. They can also see all the files in those folders in one click. Drag and drop and drag scanning. In acrobat reader, you must consent to the storage of your documents. To release the storage, you must download the file and this can take a lot of space.

Design has not yet reached its full potential of what it can be as a convergence platform - it's still hamstrung by the desktop. Photo apps are great, but they can't do it all. Web apps can. There are new opportunities to think about both how experiences are built, and how they're used. But building apps in web technologies face a number of challenges - from writing code to dealing with the restrictions of working in a browser. Over the last few years, as Chrome has been building a platform to enable these new web applications, we've seen the web design toolset and workflow evolve to meet these challenges. And in the process, we also saw the web of apps come to life, bringing to life a new paradigm of apps built in web technologies. Using new web technologies, we've been able to bring Photoshop to the web, to bring a new paradigm of design to life, and to make it easily available to everyone. Yet, despite these successes in development, there aren't many ways to create web apps, except for building them using legacy technologies, using web technologies off the shelf. WebAssembly lets us accelerate our investments in the future of the Web using the kind of performance-critical functionality needed for Photoshop. WebComponents lets us bring more HTML and CSS functionality into web applications. And the lit service worker cache lets us get the kind of offline experience that mobile apps leverage. You can also use the Paste Into or Smart Objects to combine shaped elements from other images into the current Creative Cloud document. The Blend, Smudge, and Fillet tools craft rounded elements. The Scale tool lets you warp, grow, and shrink any parts of your content. e3d0a04c9c
